## WORM HUMUS

### DESCRIPTION

Earthworm humus is a fertilizer derived from bovine manure. It is a 100% organic and natural product able to rebalance the soil thanks to the content of enzymes, microorganisms and minerals useful for the growth and development of plants. The product is a dark, light, soft, very brittle and odorless soil. It has the ability to favor a luxuriant growth, resulting particularly suitable, depending on the dosage, for any type of plant. The product is subjected to drying and sifting on a 5 mm sieve.

### RECOMMENDED USE

- Very useful as a corrective for excessively acidic or basic soils;
- Fundamental for the natural organic nitrogen nutritional intake;
- The organic component is nourishment for any kind of plant;
- For cactaceae and succulents, at 5-10% vol. on the total, as organic fraction instead of peat;
- For other plants, up to 20% vol. on the total as organic fraction

CHEMICAL-PHYSICAL AVERAGE CHARACTERISTICS		
Total Nitrogen (N)	%s.s.	2,0
Organic Nitrogen (N)	%s.s.	1,9
Organic Carbon (C)	%s.s.	26
Total Organic	%s.s.	46
Umified Organic	%s.s.	27
Ratio C/N	-	14
pH	-	7.6
